Date	Rating	Note
9/27/14 1:03:00 PM	2	Top of head. Is it from the head
9/27/14 5:05:00 PM	3	Front. Sharp.
9/27/14 7:01:00 PM	4	Painful. Front. Sharp
9/27/14 9:01:00 PM	5	Front Sharp
9/28/14 5:00:00 AM	3	Sharp. StabbingTop of head fore
9/28/14 6:00:00 AM	3	Stabbing. Front forehead now
9/28/14 7:00:00 AM	4	Front Top of head. Stabbing
9/28/14 10:03:00 AM	2	1. Top of head2. Sharp but sligh
9/28/14 12:01:00 PM	3	Stabbing
9/28/14 6:00:00 PM	1	Just sleepy now. No location
9/28/14 7:03:00 PM	2	No longer stabbing. Just dull Ins
9/28/14 10:01:00 PM	Null	An aura of sleepiness.
9/29/14 3:02:00 PM	Null	Feeling fine. Just sleepy

Sleep- calendar view

Type

Failed to Sleep Nap Normal

Sleep- labeled calendar view

Legend

- Time first to bed
- first wakeup time
- second wakeup time

To bed and wakeup times

Distribution of sleep start times

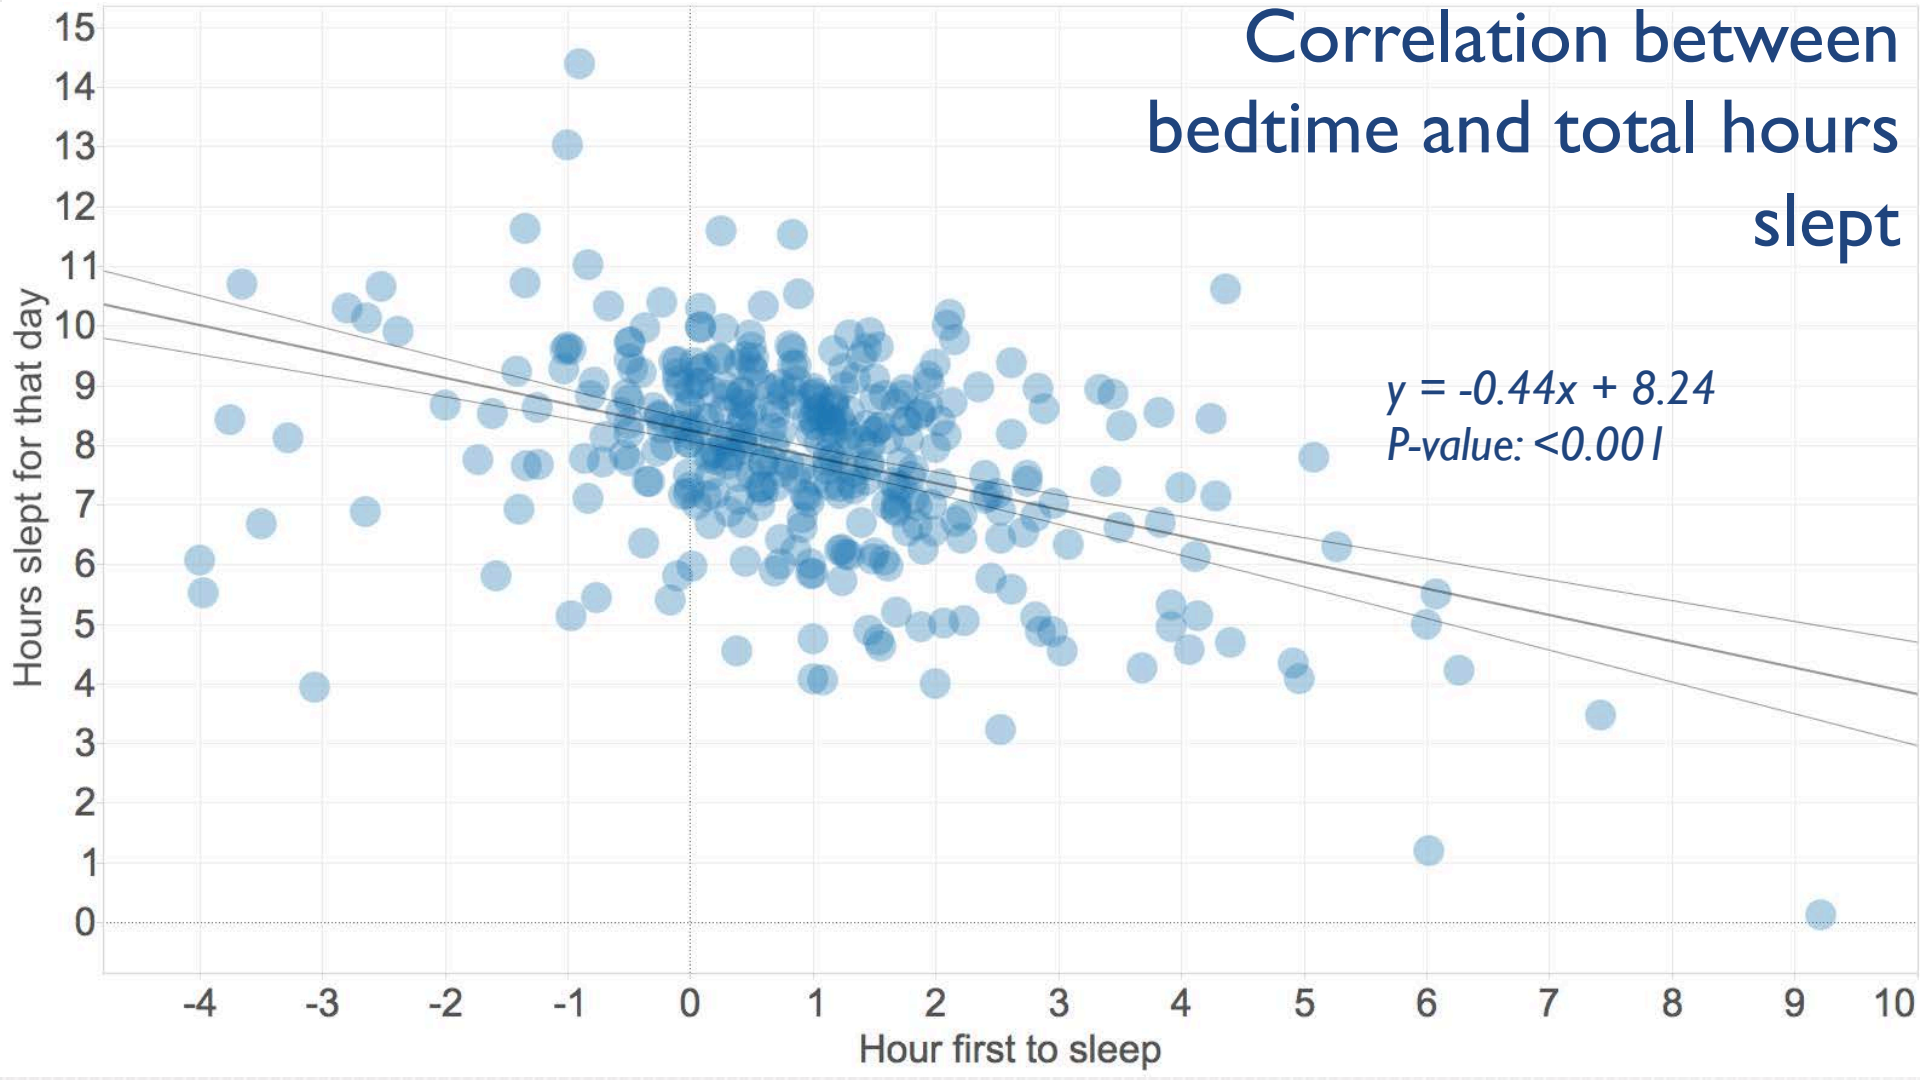

Sleep start time vs total hours slept

Count of days

1  36

Correlation between bedtime and total hours slept

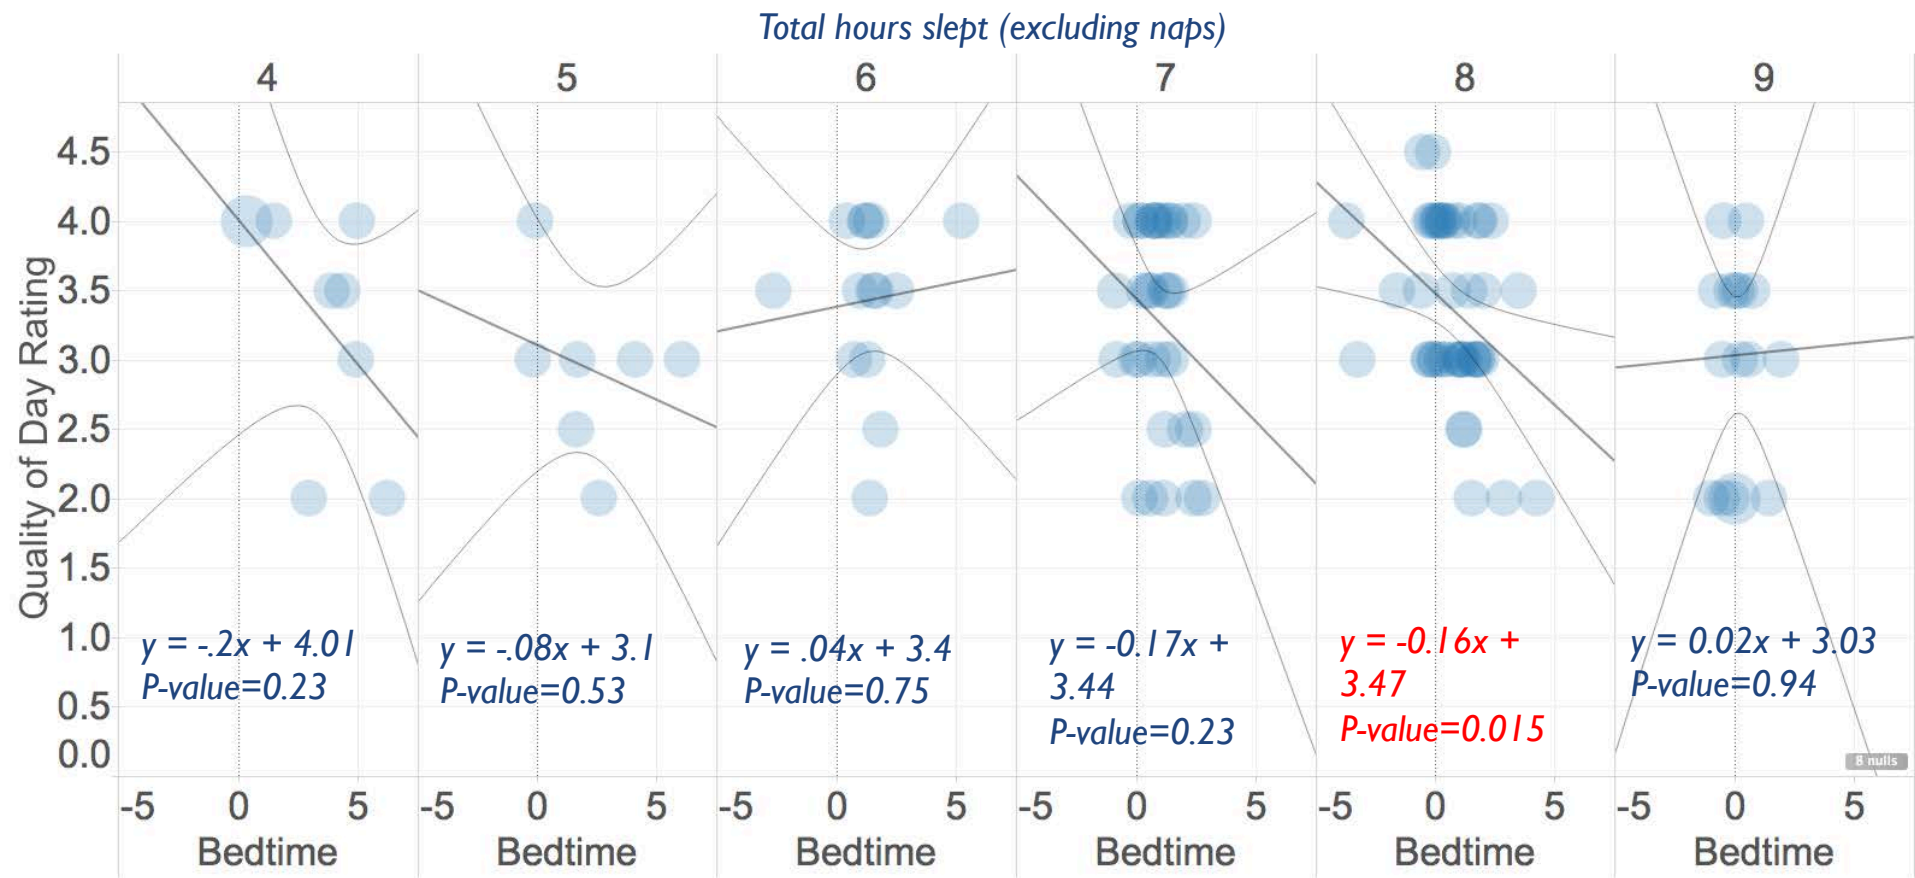

The most important metric: quality of day

- 5- perfect day. Feel great. No energy/headache problems
- 4- minor sleepiness. Affects ~1-2 hours of the day
- 3- light headache and/or heavy sleepiness. Disrupts half of day
- 2- migraine and/or heavy sleepiness. Disrupts most of day
- 1- worst day ever!

Quality of day over time

Bedtime affects quality of day, but only if I sleep ~8 hours

Intervention- Whole30

Naps before the Whole30

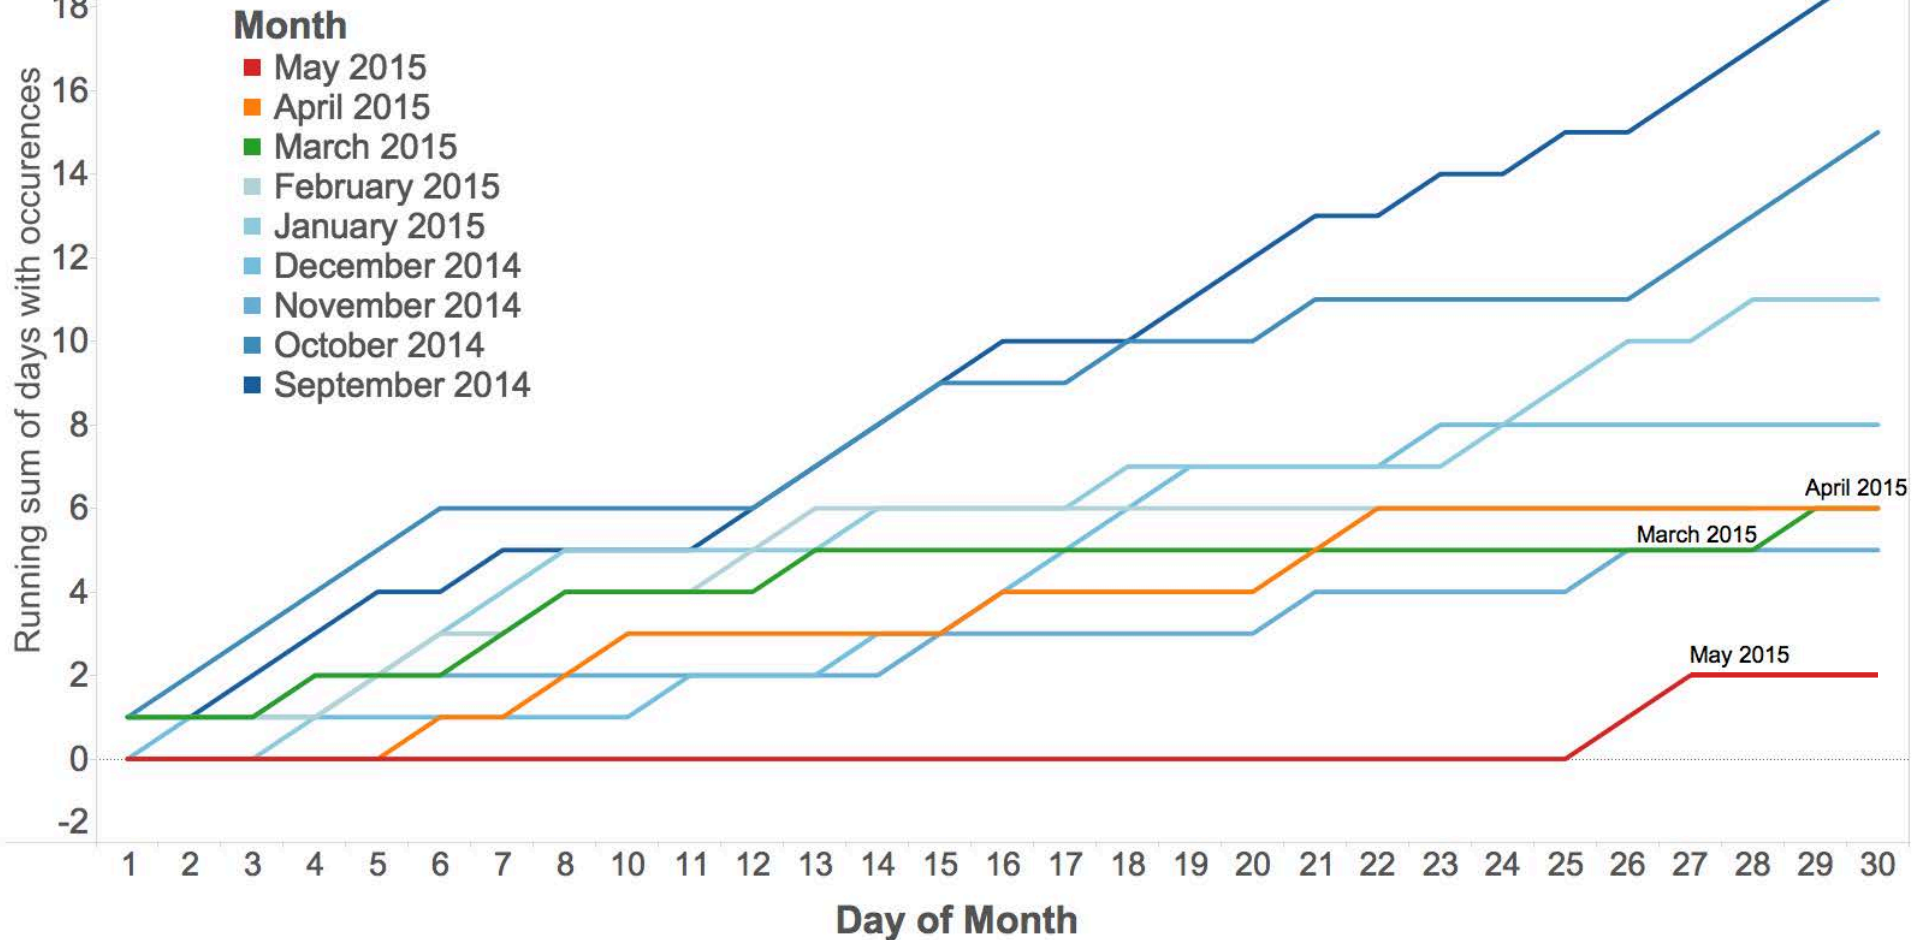

(Naps are a proxy for tiredness)

Naps were halved during the Whole30 (April 1 – now)

Nonmigraine headaches too

Migraines too, but not so much

I. Manual tracking can be awesome!

Allows me to collect nap information, which I later found to be one of the most useful metrics

I. Manual tracking can be awesome!

Allowed me to collect nap information, which I later found to be one of the most useful metrics

Allows for subjective scales that measure “quality”

I. Manual tracking can be awesome!

Allowed me to collect nap information, which I later found to be one of the most useful metrics

Allows for subjective scales

Can be tedious, but can also lead to mindfulness

2.Tools are important

Save the scripting and programming for ETL/data prep

There are many easy to use plotting tools out there

Ex: Tableau → ~5min spent per plot!

3. Real insights takes a while...

Until then, you're stuck with the obvious....
